DP® sACM Air Classifier Mill Standard Type

Pulverisers & Classifier Mills

Introduction

The DP® Air Classifier Mill is a high-speed, screenless hammer mill with an integrated air classifier. It combines impact grinding and dynamic classification in a compact unit typically for 8–40 micron particle reduction. The system ensures sharp top cut control, narrow distribution, and reliable performance—even for heat-sensitive, medium-hard materials.

Working Principle

The DP® Air Classifier Mill integrates continuous grinding and dynamic classification into a single compact unit. The feed material enters through the **feed hopper (1)**, where a **screw feeder (2)** delivers it at a regulated rate into the **grinding zone (3)**. Inside this zone, a high-speed **rotor disc (4)** fitted with **hammers (5)** accelerates the material outward. The **serrated liner (6)**, positioned along the chamber wall, enhances impact by deflecting the material back into the hammer path, resulting in efficient size reduction through repeated collisions.

As the particles are ground, a stream of air introduced through the **air inlet (7)** assists in carrying the material upward into the **classification zone (9)**. Here, the air/material mixture passes through a **baffle ring (8)** and reaches the rotating classifier rotor, housed within the classifier shaft & bearing housing assembly. Particles of the desired size pass through the classifier and exit with the air stream via the **fine product & air outlet (10)**, while oversized particles are rejected and returned to the grinding zone for further reduction. This internal loop ensures consistent fine product quality with a sharp particle size cutoff.

The mixture of fine product and air is then conveyed through external piping to a cyclonic separator, where the product is separated and collected. Any remaining ultrafine dust is carried further to a pulse-jet dust collector, ensuring clean and dust-free air discharge. The system also include a conveying blower to maintain controlled airflow. Overall, the integrated design allows for precise particle size control, energy-efficient grinding, and dust-free operation in a compact and maintainable layout.

Features & Benefits

- ▶ Integrated grinding and dynamic classification in one compact unit
- ▶ High-speed rotor with impact hammers or pins
- ▶ Stepless easy online particle size adjustment and control
- ▶ Narrow particle size distribution
- ▶ Suitable for fine and ultrafine particle size up to 8 microns
- ▶ Serrated liner for enhanced grinding efficiency
- ▶ Suitable for combined grinding and drying

▶ DP® ACM-200 Air Classifier Mill

Options and Accessories

- ▶ **Construction Materials:** Available in carbon steel, stainless steel (SS304, SS316, SS316L), or custom-engineered configurations to meet specific product or regulatory requirements.
- ▶ **Pressure Shock Resistance:** Can be designed to withstand pressures up to PSR 11 Bar.
- ▶ **Cooling Technology:** Optional integrated airflow cooling or water jacket cooling ensures safe handling of heat-sensitive materials, preserving product quality.
- ▶ **Hammer Options:** Multiple hammer configurations are available (flat, serrated, pin type), in various wear-resistant materials, based on grinding characteristics.
- ▶ **Classifier Options:** Available with dynamic classifier designs featuring variable speeds and material options (carbon steel, hardened steel, ceramics) for precise top-cut control and durability.
- ▶ **Safety Mechanisms:** Can be equipped with vibration sensors, temperature sensors, and safety interlocks to ensure operational safety and equipment protection.
- ▶ **Combined Functionality:** Option for combined drying and pulverising processes.

▶ Co-axial bearing housing assembly

▶ Range of classifier wheel designs

Machine size

Model	Rotor drive	Classifier drive	Mill speed [Max.]	Classifier speed [max.]	Air flow rate	Scale-up factor

Who are WE?

We are DP Pulveriser Industries and have been designing and building size reduction equipment in India since 1962. We believe in using the materials of the highest grade to build our equipment because we understand your need for a machine that will perform - without breakdown - day in and day out. 60+ years, 7500 installations and 32 countries later we now hold the reputation of being one of India's finest manufacturers of size reduction equipment. Regardless of the industry you operate in, DP can optimize, innovate and automate your entire process with tailor made solutions and expertise that is backed by 60+ years of experience. We are a young bunch of passionate engineers excited to work on your next challenging project

What do we DO?

DP Pulveriser Industries' offerings are broadly classified under 3 segments:

Powder Processing Equipment

Built for durability and low maintenance even after years of service, Our core strength lies in Size Reduction and Air Classification. We offer a wide range of machines to meet all your particle size requirements.

Testing and Other Services

We offer various services such as material trials of our equipment, grinding and air classification of your material on a contract basis and even particle testing and analysis at a fully equipped laboratory on the campus of our partner IIT Gandhinagar.

Turnkey Systems & Plant Automation

Thanks to our decades of experience, we understand what processing technologies and equipment are best suited for your application and industry. This means we can be your one stop solution for setting up complete powder processing plants carefully tailored to your needs.
